

Officer Report

28 October 2024

The tree is a large specimen that features prominently in the public realm. The tree has been previously cut back by a similar amount and the proposal to reduce the height of the tree to approximately 4 m to previous pruning points is reasonable and necessary in order to contain the tree at a size and scale proportionate to its location.

The proposed works will not adversely affect the health or condition of the tree nor, in the long-term, diminish the contribution that it makes to the character and appearance of the conservation area .

Decision - No objection
