1. Introduction

Background

This report details the results of Tendring District Council's 2025/26 TSM tenant satisfaction survey, delivered by ARP Research. The aim of the survey is to allow tenants to have their say about their home, the services they receive, and how these could be improved in the future. This survey meets the requirements of The Regulator of Social Housing's guidance for tenant satisfaction measures (TSMs). All social landlords are required to report TSMs annually.

Throughout the report the survey data has been broken down and analysed by various categories, including by area and various equality groups. Where applicable the current survey results have also been compared against the 2024/25 TSM survey, including tests to check if any of the changes are *statistically significant*. Finally, the results have also been benchmarked against the Regulator of Social Housing's published national 2024/25 year end TSM figures for local authorities.

About the survey

The survey was conducted by ARP Research between 28 October 2025 and 15 January 2026. It was primarily a census paper self-completion survey distributed to all 2,957 LCRA (low cost rental accommodation) tenant households.

This was followed by two further postal reminders to non-respondents, the first being a reminder letter and the final reminder being a full replacement copy of the questionnaire. The survey was also available for completion online, with two additional email reminders to 970 households with a recorded email address (12% response). The survey was incentivised with a free prize draw.

Overall, 1,020 tenant households took part in the TSM survey, which represents a response rate of 35% (error margin +/- 2.5%). This comfortably exceeded the stipulated TSM target error margin of +/- 4.0%. The final survey data was weighted by interlaced stock type, age group and area to ensure that the survey is representative of the tenant population as a whole.

Understanding the results

Most of the results are given as percentages, which may not always add up to 100% because of rounding and/or multiple responses. It is also important to take care when considering the results for groups where the sample size is small. Where there are differences in the results between groups, these are subjected to testing to discover if these differences are *statistically significant*. This tells us that we can be confident that the differences are real and not likely to be down to natural variation or chance.

For a full summary of approach including further detail on methodology, data analysis and benchmarking, please see appendix A.

TP10 communal areas clean and maintained

TP11 makes a positive contribution to area

TP12 approach to handling ASB

↑ statistically significant improvement

↔ no statistically significant change

↓ statistically significant decline

2. Executive summary

Overall satisfaction

1. Overall satisfaction with the service provided by Tendring District Council Housing Services is essentially stable at 79%, with a variation of just 2% over the first three Tenant Satisfaction Measure (TSM) regulatory surveys.
2. Consequently, the Council's score also remains in the top quartile compared to the median score of 69% from amongst all other local authorities in England (section 3).
3. A similar pattern is evident throughout the survey results, to the extent that only one out of the twelve TSM regulatory measures demonstrated a significant change, this being the approach to handling complaints where satisfaction has dropped by 13% (section 10).
4. However, when measured over a two-year period, or amongst the under 50s, there has also been a significant drop in satisfaction with the repairs service (section 6). It should also be noted that tenants living in the Harwich area are significantly less satisfied than the rest of the sample across most survey questions (section 3).
5. A key 'driver' statistical test has been used to highlight the combination of other survey questions that together are the best predictors of how tenants rate the overall satisfaction score. They are listed here in descending order of strength. The top two items are identical to last year, reinforcing the view that improving these should be the Council's top priority for increasing tenant satisfaction.
 - Repairs service received over the last 12 months (77% satisfied, section 6)
 - Provide a home that is well maintained (76%, section 4)
 - Easy to deal with (78% satisfied, section 7)
 - Listens to views and acts on them (66% satisfied, section 8)
 - Treated fairly and with respect (80% satisfied, section 8)

Repairs

6. Over three quarters of those that had received a repair over the last 12 months are satisfied with the service they received (77%). However, this rating has been trending downwards since 2023, a significant drop from 83% to 77% over that two-year period (section 6).
7. Furthermore, when tenants are asked about the time taken on the last repair, the 74% satisfaction is also eight points lower than it was two years ago, and four points lower than last year.
8. This trend in repairs satisfaction is primarily amongst the under 50s (74% v 81% satisfied with the service), which includes a 10 point drop in satisfaction for under 35s (now 71%).
9. These repairs ratings nevertheless still compare favourably against other English local authorities, where the median averages are 72% and 68% respectively.
10. Nevertheless, considering that repairs satisfaction is the strongest predictor of satisfaction overall, improving the experience should be focus for the Council. The most common complaints are again outstanding works and issues with communication (see section 12).

2. Executive summary

The home

11. The level of satisfaction amongst tenants that the Council provides a well-maintained home is stable at 76% and compares very favourably to the benchmark median of 68% being in the top quartile of all English councils (section 4).
12. The assessment of building safety is also effectively unchanged with 77% satisfaction. This too is in the top half of local authorities (median 74%).
13. A more substantial fluctuation be found in the perception of communal cleaning and maintenance, up from 51% to 57%, but this isn't statistically significant due to the low base size. However, there has also been a dip in the proportion of comments made at the end of the survey about communal cleaning so it may well be a real change. Indeed, 66% of those that receive a cleaning service are satisfied with their communal areas.

Value for money

14. There has been no change in how tenants perceive their rent value for money, with 82% feeling that it does compared to just 6% who are dissatisfied (section 5).
15. Value for money continues to be rated significantly above the overall average among tenants aged 65+, with satisfaction at 89%. In contrast, satisfaction is notably lower among tenants aged under 35 (73%). It has also increased by eight points to 90% for sheltered housing residents.

Customer service

16. The 'customer effort' score for how easy housing services is to deal with is now a key driver of overall satisfaction, with a virtually unchanged satisfaction score of 78% (section 7).
17. Further questions around respondents' last experience with customer services reveals a similar level of consistency over time, the vast majority again find staff to be friendly, approachable quick and efficient.
18. The rating for the quality of advice, being kept informed about progress and final outcome of the query are lower, all around two thirds satisfied, although this is again consistent with last year.
19. Although still lower than the ratings for telephone customer service, on average the ratings for last contact via email have increased by 10 points, most notably on speed and efficiency (68%, up 13%) and quality of response (59%, up 12%).

Communication

20. Two of the five best predictors of overall satisfaction are in this section of the survey, highlighting strong communication and customer focus scores as an important theme of this year's results (section 8).
21. The first of these is the extent to which tenants feel their views and being listened to and taken into account, so it is positive that the score of 66% continues to be in to benchmark top quartile compared to the national average of 57%.

2. Executive summary

22. Similarly, the 80% of the sample that feels they are treated fairly and with respect is unchanged since last year and above the national average.
23. When it comes to tenants feeling informed about things that matter to them, when views over a two year period there has been a significant increase in satisfaction from 65% to 72%.

Neighbourhoods

24. The rating for the positive contribution that housing services makes to the neighbourhood (60%) has been stable over the last three years and is very close to the local authority average (section 9).
25. The rating for how housing services handles anti-social behaviour also hasn't really changed over time, and in this case is identical to the average of 60% amongst similar landlords.
26. Nevertheless, it should still be noted that 15% of open text comments made by tenants at the end of the survey are about anti-social behaviour (section 12), and around a third of the sample think that anti-social behaviour and/or drugs are a problem in their local neighbourhood.
27. However, there are also statistically significant drops in the proportion who feel that dog fouling (46%), vandalism/graffiti (14%) or other crime (15%) are problems in their neighbourhood.

Complaints

28. Survey respondents are to decide for themselves if they have recently complained to their landlord rather than limiting it to a narrow definition of what constitutes a formal complaint. This means that most are likely to be escalated service requests (section 10).
29. The benchmark average is for over a quarter of survey respondents to have made a self-defined complaint. The equivalent proportion in Tendring is slightly lower than this at 22%, this being unchanged since last year,
30. Satisfaction with how complaints are handled has unfortunately dropped by a statistically significant 13 points since last year, the only TSM measure to show such a pattern.
31. Nevertheless, at 36% it remains above the national benchmark median of 31%, just no longer in the top quartile of scores.

3. Services overall

79%

satisfied
overall

top 'key
drivers'

1. repairs in last 12 months
2. home is well maintained
3. easy to deal with
4. kept informed
5. treated fairly & with respect

Overall satisfaction is stable, varying by just 2% over the last three years

Headline satisfaction continues to be in the top quartile compared to the national local authority benchmark

Repairs and property maintenance continue to be key drivers of overall satisfaction

Overall satisfaction has fallen significantly for 35-49 year olds, including a ten-point drop in the proportion 'very' satisfied

3. Services overall

3.1 Overall satisfaction

% Base 1011 | Excludes non respondents

Overall service
provided by housing
services

satisfied 2025/26 satisfied 2024/25 error margin bench mark

79 81 +/- 2.5 69

Overall satisfaction with the service provided by Tendring District Council Housing Services is essentially **stable** at 79%, with a variation of just 2% over the first three Tenant Satisfaction Measure (TSM) regulatory surveys. The same is true for the opposite end of the scale, where 11% are actively dissatisfied (was 10%).

This reflects the national picture, with recently published findings from the Regulator of Social Housing that there has only been a marginal increase this year, primarily due to methodology. Consequently, the Council's score still remains **well above** the national average compared to all other local authorities across England (median 69%), being in the benchmark top quartile.

The 2% variation in overall satisfaction since last year is **not statistically significant**, which means that the results of a standard statistics test on these results tell us that the difference is likely to be down to chance. This doesn't come with absolute certainty, and it doesn't automatically mean that non-significant differences are meaningless, but it does highlight those differences that we can be the most confident about.

A similar pattern is evident **throughout the survey results**, to the extent that only one out of the twelve TSM regulatory measures demonstrated a significant change, this being the approach to **handling complaints** where satisfaction has dropped by 13% (section 10).

However, it should also be noted although the ratings for the **repairs service** are within the margin for error compared to last year, they do show a significant drop amongst the under 50s and when analysed over a two-year period (section 6). Furthermore, overall satisfaction is also down amongst 35-49 year olds (see below).

3. Services overall

3.2 Key drivers - overall satisfaction

R Square = 0.68 | Note that values are not percentages but are results of the statistics test. See Appendix A for more details.

3.3 Key drivers v satisfaction

A 'key driver' analysis uses a regression test to check which other results in the survey are best at predicting overall satisfaction. For a more detailed explanation of key drivers please see Appendix A.

Key drivers

To help in our understanding of tenant satisfaction we use another statistical test that highlights the combination of other survey questions that together are the best predictors of how tenants score the overall satisfaction score. This is known as a **key driver** analysis and is useful in identifying hidden links that respondents may not even be conscious of. This simple statistical model provides useful insight into the results, although note that there will be many other factors that it is unable to take into account.

The two best predictors of overall satisfaction are identical to those identified last year, being the linked ratings of satisfaction with the **repairs service in the last 12 months** and the standard of **property maintenance**. This is consistent with the steady drop observed in the ratings for the repairs service and clearly indicates what the priority should be for the Council to improve tenant satisfaction.

The other three items on the list are all related to **customer service** and **communication**. It is good to see that all three ratings are strong and consistent with last year, so this is probably a positive association recognising that the improvements made between 2023 and 2024 have been maintained (see sections 7 and 8).

3. Services overall

By people

- Whilst there are some variations by **age group**, the range is a little tighter than is common in other similar tenant surveys. Nevertheless, the 65+ age group are significantly more likely to be satisfied overall (81%), which includes 50% that are very satisfied.
- Conversely, the poorest overall rating is given by respondents in the 35-49 age category (77%), primarily because at 33% the proportion of this group that are 'very' satisfied is significantly lower than both the 44% average, and the 43% achieved last year. This is most likely linked to the significant drop in the repairs service ratings amongst the under 50s (see section 6).
- There is only one significant distinction by **length of tenure**, with new tenants (under 1 year) being 5% more satisfied than average, which is typical in tenant surveys (84%).
- Once again, there is a significant difference in overall satisfaction between respondents with a **disability** and those without (77% and 84% respectively), a pattern very much evident throughout the survey findings (table 13.12).
- Whether or not a tenant had **been in contact** is also a factor on the scores throughout the survey findings, with those who had done so being significantly less satisfied overall than those who had not (73% v 84%), with the former down 6% whereas the latter has not changed compared to a year ago.

By place

- Overall satisfaction amongst **general needs** tenants has gone down by 3% to 79%, however it has increased by an identical amount amongst tenants in sheltered accommodation from 76% to 79%.
- Despite both groups being equally satisfied overall, tenants in sheltered accommodation are typically more positive with every rating than those in general needs, significantly so for half of the core TSM scores (see table 13.13).
- There are some significant differences in overall satisfaction between the nine main **areas**, with respondents living in Walton & Frinton (CO13 and CO 14) significantly more satisfied than average (84%), most notably due to the very high proportion who are 'very' satisfied (57%). The opposite is true for those living in West Clacton or Harwich (70% and 74% respectively). Indeed, respondents from the Harwich area tend to be significantly less positive about most core findings as seen in table 13.18.
- When analysed by **property type** those living in bungalows are unsurprisingly still the most satisfied group (81%, down 5%) followed by houses (81%), leaving residents in maisonettes as the least satisfied (69%, table 13.14).
- Whilst not statistically significant, respondents claiming to live in a property with **communal areas** are less satisfied than those who do not (76% v 81%), with those receiving a cleaning service provided by the council to such areas even less satisfied overall (73%).

4. The home

77%

safe

76%

maintained

Satisfaction with property maintenance remains the second best predictor of overall satisfaction

This is rated in the top quartile compared councils across England, and property safety is above average

Although still lower than average, there is an uptick in satisfaction with communal upkeep (now 57%). This rating is higher for those who receive cleaning services (66%)

There are also fewer comments this year about communal cleaning

4. The home

The second strongest key driver of overall satisfaction across both this survey and the last is providing tenants with a **home that is well maintained** (section 3). It is therefore to the Council's credit that this score is well above the norm achieved by similar landlords (76% v 68%), being in the top quartile compared to that benchmark. It has also barely varied across the three TSM survey so far.

When considering another linked element of the service, namely tenants' assessment of **building safety**, this score is also broadly unchanged since last year (77% v 80%). This too is in the top half of local authorities (median 74%).

A more substantial fluctuation can be found in the perception of **communal cleaning and maintenance**, up from 51% to 57%, but this isn't statistically significant due to the low base size. However, there has also been a dip in the proportion of comments made at the end of the survey about communal cleaning (see chart 12.3), so it may well be a real change. Regardless, there is still more to do on this before the Council matches the 63% national average score.

It should be noted here that only a minority of the total survey sample are asked this question (45%), which is restricted to only those that say they live in a building with communal areas, either inside or outside, that their landlord is responsible for maintaining.

This question wording is mandatory for TSM surveys, but it does allow any tenants to answer if they believe their building has such communal areas, regardless of whether they do or not. Indeed, the **Council's records** agree for only three quarters of those that answered in the affirmative (75%). This does though appear to have no appreciable effect on how they answer, as there is no significant difference in the response between the two.

Where there is a significant difference is for those that receive a communal cleaning service for the Council, amongst whom 66% are satisfied with the upkeep of their communal areas.

4. The home

4.1 Satisfaction with the home

% Bases (descending) 997, 1007, 458 | Excludes non respondents

4. The home

By people

- The **under 50s** remain significantly less satisfied than the rest of the sample with both property maintenance and safety (both 70%, see table 13.10).
- Satisfaction amongst the under 35s has dropped slightly for both; maintenance (74%, down 4%), safety of the home (69%, down 7%).
- Satisfaction with communal cleaning and maintenance has improved for every age group, albeit significantly below average for the under 35s (46%). This includes a big improvement amongst 35-49 year olds, from 38% to 53%.
- The highest ratings for maintenance and safety of the home are again to be seen amongst the over 64s (both 84%).
- Respondents **with a disability** are significantly less satisfied with the maintenance of their homes (73%), compared to 83% of respondents with no disability. An even greater disparity is evident for the safety rating – 73% 'disability', 87% 'no disability'.
- Respondents in their **first year** with the council are 4% more satisfied than average that their home is well maintained (80%) and 6% more satisfied that it is safe (83%), but when the length of tenure reaches 3-5 years, satisfaction with the safety rating becomes significantly lower than average (74%, table 13.16).

By place

- All three ratings in this section are higher for tenants in **sheltered accommodation** than general needs, significantly so in terms of maintenance (89% v 74%) which is up 12% for sheltered.
- There is a similar significant difference with the cleaning and maintenance of communal areas, with 77% of sheltered tenants satisfied, compared to only 52% for those in general needs.
- By **property type**, respondents in houses and maisonettes are significantly less satisfied with maintenance (73% and 45% respectively), compared to 81% in bungalows and 90% in bedsits.
- Respondents in bungalows are also once again the most likely to be satisfied with safety (89%) including 47% that are 'very satisfied'. As with the rating for maintenance, satisfaction with safety is significantly lower for maisonettes (59%) as well as those in flats (74%, table 13.14).
- **Property size** is also an important differentiator with those in properties with two or more bedrooms significantly less satisfied with the maintenance of their home (table 13.15).
- Maintenance is rated significantly lower than other **areas** in both the Harwich and Brightlingsea (64% and 69% respectively), but significantly higher towards the east in Walton & Frinton (81%).
- Respondents in Harwich also scored building safety far lower than average at just 58%. Indeed, this rating was in the high 70s or early 80s in every other area, the highest being in Dovercourt (83%).
- Around a third of respondents in the CO15 postcode area (Clacton & Holland) receive communal cleaning and maintenance services, but those that do are unusually positive about them (76%, table 13.18).

5. Value for money

82%
satisfied with rent
value for money

No change in this rating over the last 12 months

Satisfaction is highest amongst those aged 65+, with a substantial increase in satisfaction for sheltered housing

This rating is now longer a predictor of overall satisfaction, unlike last year when it was a minor key driver

5. Value for money

5.1 Value for money

% Base 1002 | Excludes non respondents

Affordability is a major issue across the sector as more tenant households than ever are struggling to make ends meet. Social housing landlords have significant financial constraints in their ability to alter rents and other charges, so must demonstrate value for money in a range of other ways.

Nevertheless, there has been no change in how tenants perceive their rent value for money, with 82% feeling that it does compared to just 6% who are dissatisfied.

By people

- Value for money continues to be rated significantly above the overall average among tenants **aged 65+**, with satisfaction at 89%. In contrast, satisfaction is notably lower among tenants aged under 35 (73%).
- New tenants** with less than one year of tenure also report significantly higher than average satisfaction with their rent (88%), although this represents a substantial decline from last year's figure of 96%. Satisfaction drops to 80% among tenants with 1–2 years' tenure and falls further still to 78% for those who have been tenants for 3–5 years, the lowest of all tenure groups.
- Households that include someone with a **disability** are significantly less satisfied that their rent represents value for money compared with households without a disabled member (79% v 88%).

By place

- Tenants in **sheltered accommodation** are now significantly more satisfied than those in general needs with how they feel about value for money (90% v 81%) and whilst the latter has barely changed, satisfaction amongst the former has increased by 8%.
- There are some significant differences in the rating for rent by **area**, with satisfaction significantly above average in Walton & Frinton (91%), but significantly lower than average in North Clacton & St Oysth (77%) and Harwich (78%).
- In terms of **property type**, there is no difference with the rating between flats and houses (both 82%), with those in bungalows being significantly more satisfied than average (85%) but 6% less so than a year ago (was (91%).

6. Repairs

77%

service in last
12 months

74%

time taken to
complete repair

Satisfaction with the repairs service over the last year is once again the strongest key driver of overall satisfaction

Unfortunately, both ratings in this section have been trending downwards since 2023

The decline is most evident amongst younger tenants aged under 50

These repairs ratings nevertheless still compare favourably against other English local authorities

6. Repairs

One of the primary candidates that might explain the small downtick in overall satisfaction (section 3), plus the considerably larger drop in in how well complaints are seen to be handled (section 10) is whether tenants feel satisfied with the **repairs service they received** over the last 12 months.

Although this hasn't changed by a statistically significant margin since last year, it is close to that threshold being four percentage points lower (77% v 81%). It has, however, dropped significantly compared to the score two years ago (was 83%), and is also now significantly worse than it was amongst the under 50s (see below).

The pattern is similar for the second regulatory measure that asked about the **time taken** on the last repair. In this case the 74% satisfaction score is now 4% lower than it was last year, but with an eight-point drop compared to the year before.

In both instances these ratings are still comfortably **above the median** average for other local authorities in England (72% and 68% respectively), but the downward trend should still be a concern. This is especially so when considering that the repairs service overall remains the strongest **key driver** of overall satisfaction, being just ahead of property maintenance which itself is on a similar topic (section 3).

In terms of those areas of the repairs service that might need the most improvement, if judging by the additional comments made by tenants at the end of the survey, the most pertinent are once again about **outstanding jobs** and the need for **better information and communication** about progress on repairs reports (see section 12).

By people

- There is a significant decline in satisfaction with repairs overall amongst the **under 50s** (74% v 81%), which includes a 10 point drop in satisfaction for under 35s (now 71%).
- The same pattern is there for under 50s for time taken on the last repairs, albeit not quite as strong (71% v 77%).
- For the older age groups there are only minor variations, with retirement age tenants being the most satisfied group (83%).
- Note that whilst both repairs scores are significantly higher amongst white British respondents than the small number of respondents those from an ethnically diverse background, this is probably only because the latter are on average much younger (table 13.11).

By place

- Tenants in **sheltered accommodation** are more satisfied than general needs on both questions, most notably with the time taken which is a significant variation (82% v 74%, table 13.13) and is very different to a year ago when both groups were equally satisfied (was 78%).
- Recent experiences when receiving repairs are the only area of the service where satisfaction levels amongst residents in the Harwich **area** are on par with the rest of the sample.
- In contrast, tenants in the Brightlingsea **area** are uniquely less satisfied than average with both the repairs received overall (70%) and their timeliness (72%, including just 38% very satisfied).
- Satisfaction with the repairs service overall and timeliness are significantly higher than average in the Dovercourt area (80% and 77% respectively, table 13.18).
- The repairs service overall is rated notably lower compared to a year ago amongst respondents in **bungalows** with satisfaction falling from 90% to 80%, with a more modest 4% fall seen amongst those in flats (78%, was 82%) and houses (74%, was 78%).

5.1 Repairs and maintenance

% Bases (descending) 717, 717 | Had a repair in the last year. Excludes non respondents

7. Customer service

78%

easy to deal with
(customer effort)

The 'customer effort' score for how easy housing services is to deal with is now a key driver of overall satisfaction

When making contact, the vast majority again find staff to be friendly, approachable quick and efficient

Although still lower than the ratings for telephone customer service, there are big improvements in these scores where the last contact was via email, especially speed of response

7. Customer service

7.1 Easy to deal with

% Base 997 | Excludes non respondents

Whether or not the housing service is **easy to deal with** isn't one of the twelve TSM questions required by the regulator but is instead focused specifically on the customer service experience, being considered a way of scoring the level of **customer effort** required to interact with a service provider.

As is evident from chart 7.1 above, this score is similar to many other survey results being essentially **unchanged** since last year (now 78%). However, what is different to a year ago is that this rating has more predictive value than it did before, being a key driver of overall satisfaction, alongside a couple of other communication ratings (see section 3 and 8).

This general impression of how easy it is to access the Council's Housing services is borne out by the further questions around respondent's last experience with customer services (if within 12 months). This reveals more consistency over time, with most finding staff to be both **friendly and approachable** (86%) plus **quick and efficient** (75%).

The rating for the quality of advice, being kept informed about progress and final outcome of the query are lower, all around two thirds satisfied, although this is again consistent with last year.

Most contacts are made via either **phone** (74%) or **email** (25%), but there continues to be significant differences between the two methods on every satisfaction rating in favour of telephone, although the gap has closed (table 7.4).

Indeed, on average the ratings for last contact **via email have increased** by 10 points, most notably on speed and efficiency (68%, up 13%) and quality of response (59%, up 12%).

7. Customer service

7.2 Last contact

% Bases (descending) 434, 432, 429, 423, 431 | Had contact in the last 12 months. Excludes non respondents.

7.3 Method of last contact

% Base 438 | Made contact in the last year

7. Customer service

7.4 Last contact by method

		% positive

By people

- **Older** respondents are again markedly more satisfied that the council is easy to deal with than those aged 35–64 (84% vs 74%), while satisfaction among the youngest group sits at 78%.
- Whilst the under 35s are notably the least satisfied group when it comes to rating friendliness and approachability (77%, 9% below average), they are typically more satisfied than average with every other aspect of their last contact.
- **New tenants** in their first year of tenure are more satisfied than average that housing services are easy to deal with (80%), however this has fallen from 90% a year ago. Satisfaction is lowest for respondents who have been a tenant for 3 – 5 years (74%).

By place

- Tenants in **sheltered** accommodation are more satisfied than those in general needs that the council are easy to deal with (85% v 77%) however they are once again notably less satisfied with most aspects of their last contact than those in general needs, especially so with the ability of staff to answer a query (57% v 75%) and with being kept informed (48% v 62%).
- Indeed, both latter two ratings had fallen dramatically amongst sheltered tenants compared to a year ago as they are now 13% less satisfied with the ability of staff to deal with their query and 17% less satisfied with being kept informed.
- The area in which tenants live has a weaker relationship to these questions than other section of the survey. The only distinction is for Walton & Frinton where 84% find the Council easy to deal with, compared to just 5% who are dissatisfied.

7. Customer service

7.5 Preferred method of being kept informed/getting in touch

% Base 1020

2025/26

2024/25

8. Communication

Communication is a theme of the survey results, with three of the five key drivers on this topic

All three ratings in this section are above the national average, with listening to tenants views being in the top quartile

Over a two year period there has been a significant increase in the proportion who feel they are kept well informed

Sheltered housing tenants are also now significantly more likely than before to feel they are being listened to

8. Communication

In the current survey two of the five best predictors of overall satisfaction are in this section of the survey, with third being the customer effort score (see section 7), highlighting the strong scores achieved for communication and customer focus is an important theme of this year's results.

The first of the two key drivers in this section is the extent to which tenants feel their views and being **listened to** and taken into account, so it is positive that the score of 66% continues to be in to benchmark top quartile compared to the national average of 57%.

A similar pattern is true for the two other TSM ratings in this section of the survey, which are both also unchanged over time and rated slightly above the equivalent benchmark. This includes 80% of the sample that feels they are **treated fairly and with respect**, and 72% who feels they are **kept informed** about things that matter to them. On the latter measure, there is some evidence of slow improvement over time as whilst the comparison between this year and last shows no significant change, there is one between 2023 and 2025 (up 7%).

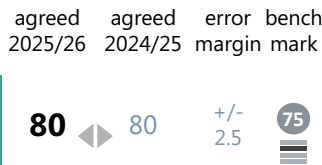

Indeed, this positive impression continues elsewhere in the survey results, as only a small proportion of comment made at the end of the survey are about customer service and communication (excluding repairs specific communication, see section 12).

listens to views

By people

- All scores are significantly lower than average for the **35-49** year olds, and above average for those of retirement age, significantly so for listening to views and being kept informed (see table 13.10).
- Nevertheless, it is noted that the under 35s a little more likely to agree that they are treated fairly and with respect than a year ago (85%, was 81%) and are far more satisfied that they are being kept informed than they were previously (77%, was 68%), with both scores now significantly above average. This group are also more satisfied with being listened to (65%, was 61%).
- **New tenants** are typically more positive than average with most aspects, especially being listened to and having views acted upon (78% satisfied), which is 12-points above average (table 13.16).
- Respondents who have recently **had a repair** are significantly less satisfied with being kept informed than those who have not had a repair (70% v 75%).
- The small group of respondents from a **diverse ethnic** background are more positive than the rest of the sample with all measures in this section, significantly so in terms of being treated fairly and with respect (85% v 80%, table 13.11).
- Respondents with a **disability** are significantly less satisfied than average with being listened to and being kept informed (61% and 69% respectively), compared to 74% and 78% amongst those with no disability. The former are also less likely to agree they are being treated fairly and with respect (77% v 85%, table 13.12).

By place

- Respondents in **sheltered accommodation** remain more positive with every rating than those in general needs, significantly so with being treated fairly and with respect (85% v 79%). This includes an eight point increase in the proportion of sheltered tenants that feel they are being listened to (now 69%, table 13.13).
- Residents in the Harwich **area** are significantly less positive with every rating in this section (table 13.18).
- The remaining areas are reasonably consistent with the exception once again of Walton and Frinton which rated being kept informed significantly better than any other area with almost half being 'very' satisfied (48%, 74% satisfied in total).

9. Neighbourhood

There is virtually no change in either of these scores over the past year

They are also very consistent with the average scores across the country for other local authorities

Nevertheless, issues in the neighbourhood are the most common topics for additional survey comments, including 15% of all comments being about anti-social behaviour

Many comments are also about parking, and 26% say this is a major problem

9. Neighbourhood

Indeed, as is evident from chart 9.2, around a third of the survey sample still say that drugs or noise are a problem in their neighbourhood, with over one in ten in each case claiming this to be a major problem.

On a more positive note, the survey results suggest that there may some small improvements being noticed by tenants, as there are statistically significant drops in the proportion who feel that **dog fouling** (46% v 50%), **vandalism/graffiti** (14% v 17%) or **other crime** (15% v 19%) are problems in their neighbourhood.

However, the most common issues remain **rubbish/litter** (53% problem, including 19% major problem) and **car parking** (53% problem, including 26% major problem). Indeed, there are also many additional comments made by respondent on the topic of parking (section 12).

By people

- Satisfaction with the contribution to the neighbourhood is rated highest for the **65+ age group** (69%, up 1%), whilst only 58% of 50–64 year olds say the same. Once again, the 35–49 year group is the least satisfied (54%, table 13.10).
- For the ASB question the lowest score is given by the 50–64 year olds (52%), with those aged 65+ also giving a score that differs significantly from other age groups (62%).
- **New tenants** (under 1 year) are the most satisfied with the council's contribution to their neighbourhood (70%, 10% above average) and their approach to handling ASB (71%, 14% above average, table 13.16).
- Respondents with a **disability** are again significantly less satisfied than average with the council's contribution to where they live and how they handle ASB (58% and 53% respectively), compared to 67% and 63% for those with no disability.
- The small group of respondents from an **ethnically diverse** background are more satisfied than white British tenants with the council's contribution to their neighbourhood (72% v 61%) and are 10% more satisfied with how ASB is handled (66% v 56%).

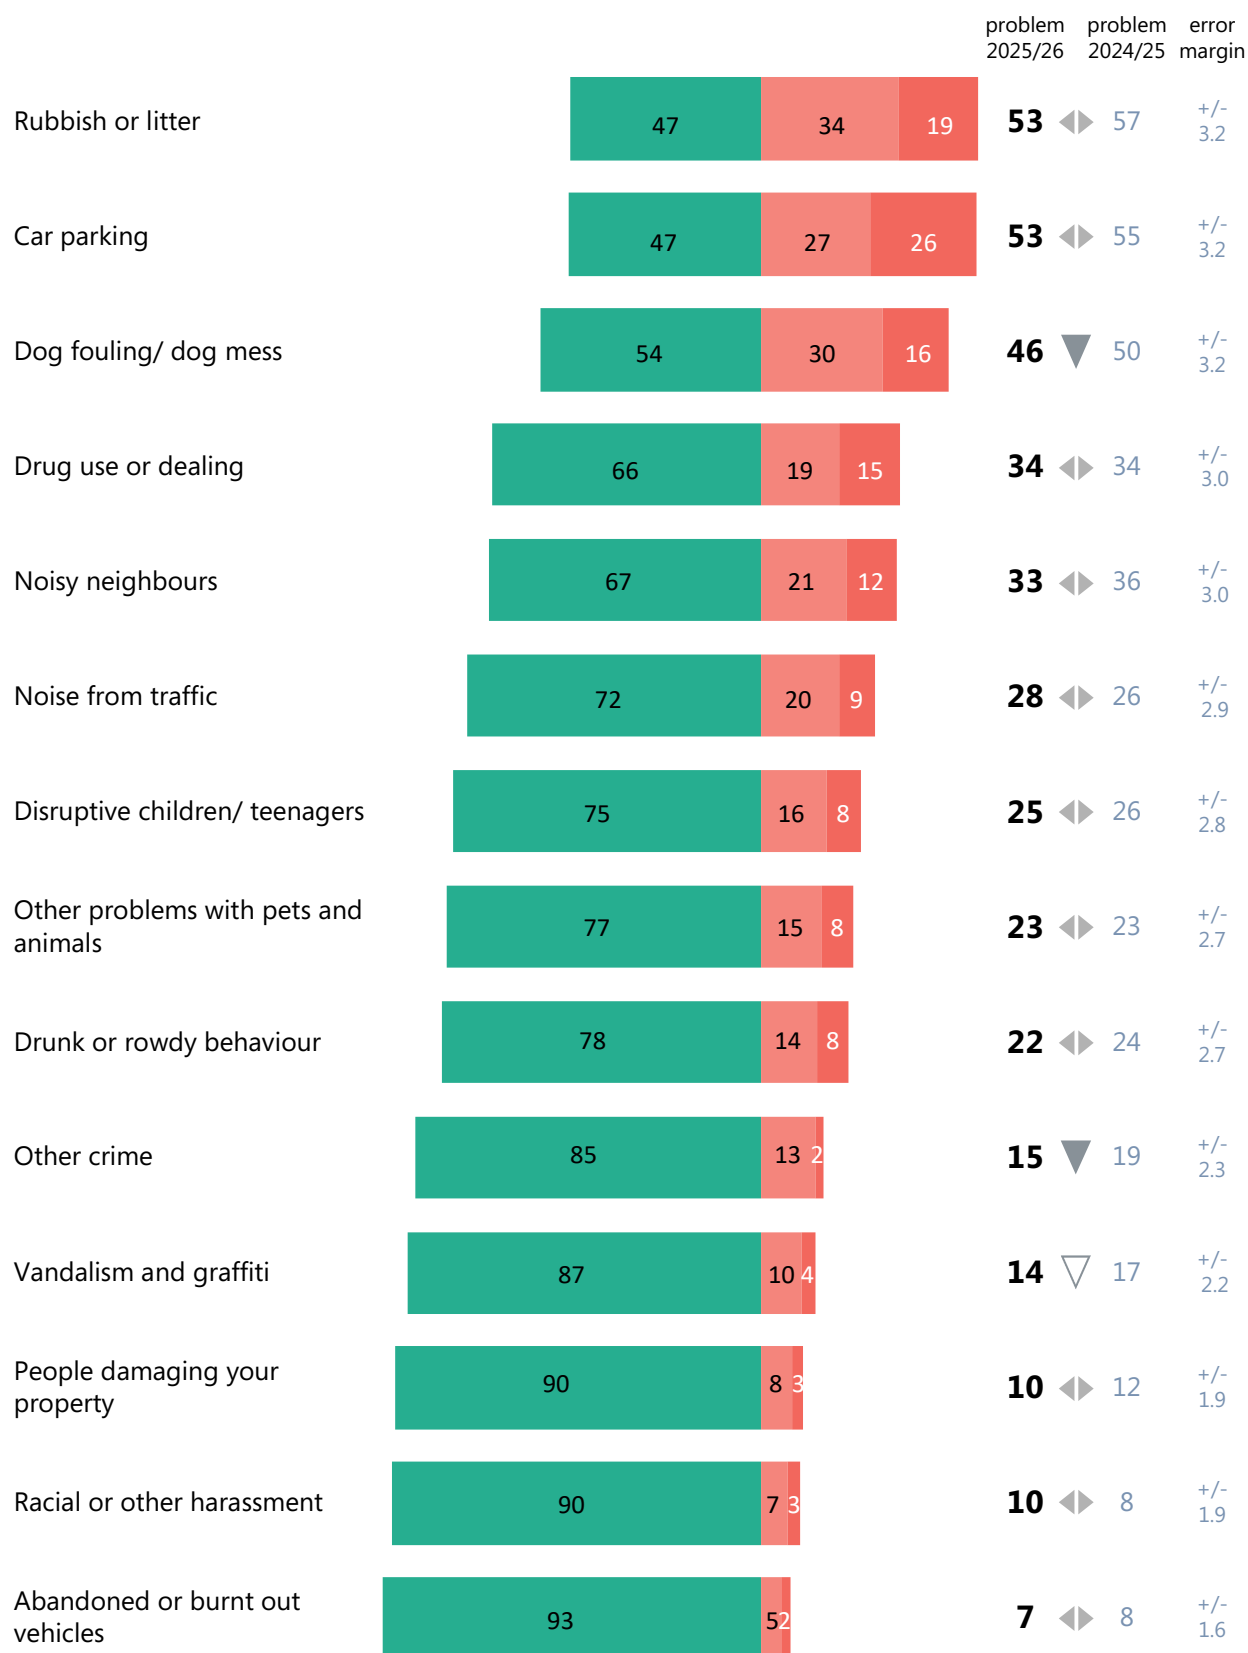

By place

- Tenants in **sheltered accommodation** are now significantly more satisfied than general needs tenants with housing service's contribution to their neighbourhood (71% v 59%). A similar pattern is evident for the ASB rating (72% and 55% respectively) with both scores identical to that reported in the last survey.
- By **area**, Harwich residents report significantly lower than average levels of satisfaction with the council's contribution to their neighbourhood (42%). On the other hand, Walton & Frinton give a significantly higher score (68%, table 13.18).
- Respondents in Harwich also view the majority of neighbourhood issues as significantly more of a problem, as do those in West Clacton, whilst most of the top neighbourhood issues are significantly less of a problem in Manningtree (CO11) and the Rural villages (CO16 0 & CO16 9) areas (table 9.3).
- Around two thirds of respondents in Manningtree are satisfied with how the council deal with ASB (63%) which is significantly higher than any other area. Unsurprisingly, satisfaction is significantly lower in Harwich (48%) and in the central CO15 postcode area of Clacton & Holland (51%).

10. Complaints

36%
▼

complaints handling

22%

said they complained

Be aware that most respondents that claim to have made a complaint will not have used the formal complaints system, but instead made escalated service requests

Satisfaction with how it is handled has dropped by 13% since last year, the only TSM measure to show such a pattern

Satisfaction nevertheless remains above the national average, but is no longer in the top quartile

10. Complaints

The Tenant Satisfaction Measures framework was designed to cover the most widespread concerns amongst social housing tenants, including using language that relates to the everyday experiences of using these services. This includes asking survey respondents to **decide for themselves** if they have recently complained to their landlord rather than limiting it to a narrow definition of what constitutes a formal complaint.

Accordingly, for tenants this covers a wide range of interactions, few of which are typically formal complaints, with many more being **escalated service requests** such as following up on issues with previously reported repairs.

Indeed, from 2024/25 data for local authority landlords published by the regulator, an average of 27% of survey respondents say they have **made a complaint** using this less formal definition.

This proportion is similar in Tendring, where for the last two years in a row, 22% of the survey sample claim to have made a complaint.

Nevertheless, satisfaction with how such complaints or escalated service requests are managed has **significantly worsened** since last year (36% v 49%), the only rating statement in the whole survey to show this pattern.

That said, it remains **above the national benchmark** median of 31%, just no longer in the top quartile of scores.

The exact reason for the deterioration in this score isn't immediately apparent from the survey results, although it is possible that it is linked to the downward trend in the ratings for the repairs service, this being the most common reason for tenants to interact with their landlord (see section 6).

By people

- Younger tenants aged **under 35** are the least likely to have complained to the Council than any other age group (16%). In comparison, around a quarter of the other three main age groups say they have complained, and this figure is highest amongst the 50-64 year olds (25%).
- However, this group are the most satisfied with how these complaints are handled (43%), compared to just 26% of the under 50s. It should be noted that this score is particularly low amongst the under 35 age category, but this sub-group is very small so it includes just 14 actively dissatisfied households (table 13.10).
- Once again, tenants who **had a repair** in the previous year are more likely to complain than those who have not (24% v 18%).
- Respondents with a **disability** are nearly twice as likely to have made a complaint than those who do not (26% and 14% respectively) and are significantly less satisfied with how it was handled (33% v 43%, table 13.12).

By place

- By **stock type**, an almost identical proportion of general needs and sheltered tenants have made a complaint (22% v 23%). The former are more satisfied than the latter with how it was handled (37% and 28% respectively), although due to the small sample sizes it isn't a statistically significant difference.
- By **property type** complaints from the small group of residents in maisonettes are the most common (32%), followed by 25% in flats and 23% in bungalows. Complaints are lowest from respondents in houses (17%).
- There is a 19 point spread across the nine main **areas** on the proportion making a complaint – ranging from 15% in Walton & Frinton to 34% in Harwich, with the latter the only one to differ from the rest by a statistically significant margin.
- Satisfaction with how any such complaints are dealt with is rated significantly lower in West Clacton (28%) and significantly higher in Manningtree (61%), but note that for this question all sample sizes are small (table 13.18).

10.1 Complaints

% Base 222 | Made a complaint in the last 12 month. Excludes non respondents

Approach to handling complaints

36	49	+/- 6.3	31

11. Sheltered housing

86%

sheltered housing
officer service

82%

scheme facilities

Overall satisfaction amongst sheltered housing tenants has rebounded somewhat since last year, with a big improvement in the rating for being listened to

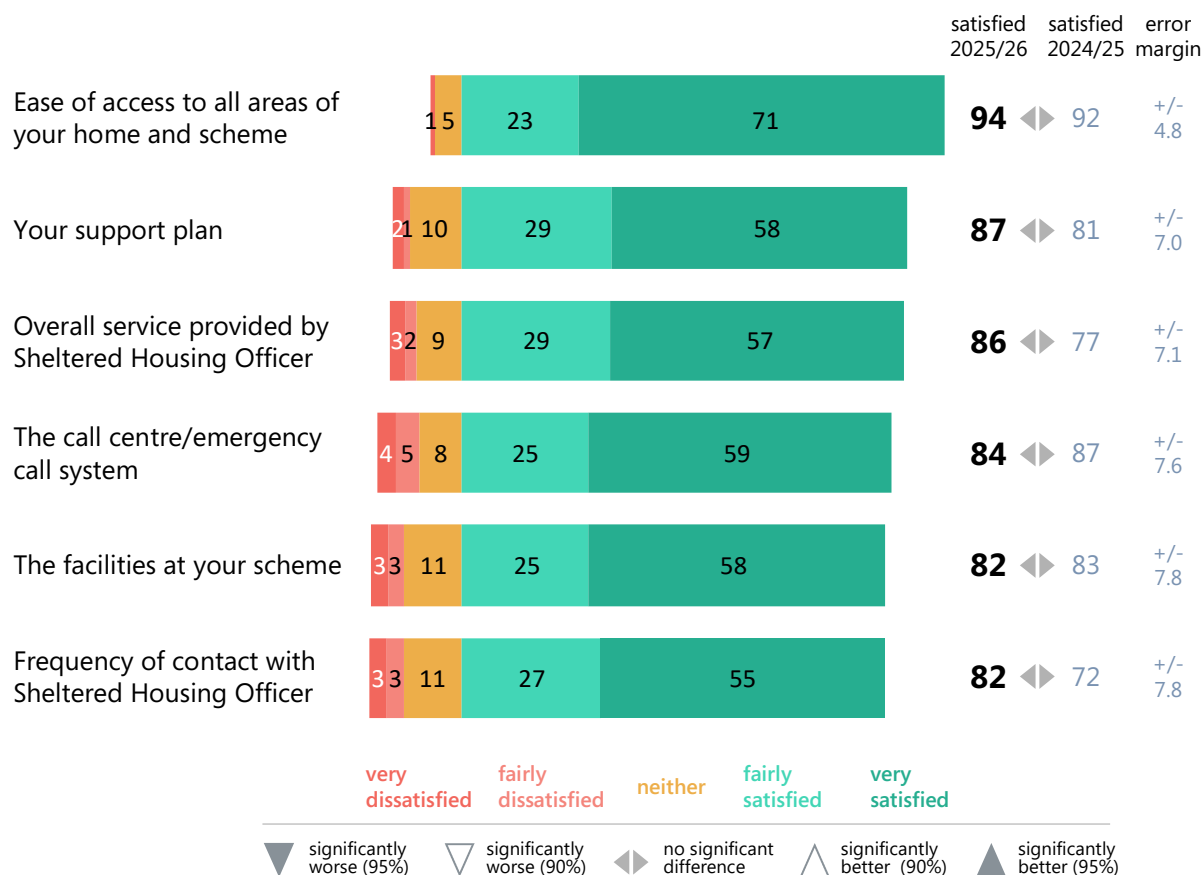

There are also 9-10% increases in the ratings for the Sheltered Housing Officer services

11. Sheltered housing

11.1 Sheltered housing

% Bases (descending) 92, 90, 91, 92, 90, 92 | Excludes non respondents.

The overall level of satisfaction amongst sheltered housing tenants was uncharacteristically low in 2024, and whilst this continues to the case in 2025, it is at least now **on par with general needs** at 79%.

However, as was also true last year, almost all of the remaining TSM questions are rated at or above the level for other tenants, most notably **property maintenance** (89%), **communal cleaning** (77%) and **handling ASB** (72%). Furthermore, there has been a big improvement in the proportion that feel they are being listened to (see section 8).

This positive story is also evident in the unique survey questions for this group, where all six questions in chart 11.1 have satisfaction levels over 80%, including 55% or more being 'very satisfied'.

This includes almost all respondents being happy with **the ease of access** to their home and scheme (94%), and almost as many being happy with the support in the form of their **support plan** (87%) and/or **Sheltered Housing Officer** (86%).

The latter two ratings are notably higher than they were last year, including a **9% improvement** in satisfaction with Sheltered Housing Officers, and a 10 point increase in the rating for frequency of contact (now 82%). Although not statistically significant changes, this is primarily due to the small base size and high ratings making that threshold harder to achieve.

12. Additional comments

12.1 Additional comments about home and/or services provided - summary

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12. Additional comments

One of the final questions that residents were asked at the end of the survey was simply to provide any further feedback. These comments are again coded and organised into different categories, both as broad headings, and in a further level of detail. Note that many respondents made comments that fall into multiple categories.

Chart 12.1 presents this analysis in terms of just a handful of broad categories. Once again **neighbourhood issues** are the most common topic (37%, was 39%). This is similar to last year, but is in contrast to many landlords where property or repairs concerns are the most common topics to be raised.

As is typical in tenant surveys, **dealing with anti-social behaviour** remains to most common neighbourhood issue raised in the comments (15%, chart 12.2). Follow it is again the issue of **parking** (8%), however, this year there are fewer mentions of **untidy gardens and garden maintenance** (6%, was 9%) or litter and rubbish (3%, was 7%).

“Constantly reporting illegal activity, experienced harassment and abuse from neighbour ever with video evidence of activity, not one thing has been done or put in place to alleviate this. Have an ongoing complaint open with housing ombudsman as a result of Tendring Council not dealing with problems/complaints in an appropriate or timely manner. Very much left to own devices with little to no communication (applies to whole block).”

“Please, please deal with the drug dealing that is ongoing it is having a detrimental effect on all the other tenants by this one person’s actions and the actions of all who are involved with him! It was gone on long enough and the fact that the council have a zero tolerance in relation to this is a joke as they have let down all the other tenant’s rights to be able to live quietly and safely in their homes. Very disappointed by this.”

“Since moving in to my temporary accommodation me and my children have had to smells drugs constantly, listen to dogs bark all day dog mess everywhere, drunk neighbours or drugged up neighbours screaming and fighting each other. Finding disgusting vile notes posted on walls of the building which can be seen by my children. Also not feeling safe as there is no security door any one can get into the building. I have found a passed out person outside my door either drunk or drugged and my children witnessed this. It is disgraceful.”

“Like it here, but don’t like the smell of drugs from neighbouring houses when come home, smell even gets into our home. Neighbour has been spoken to by council but continues to be able to smoke drugs in house & garden.”

“The 2 parking areas for cars need to be tenant parking only as people from house’s opposite or other roads dump their cars in the parking area’s leading to a shortage of parking for flat tenants. A black Audi TT has been abandoned for at least 7 years.”

“I think the car park should be made a bit bigger. I also think that this should be permit holders only on the road & car park. As every time something is going on we cannot park in the car park or on the road.”

“Allocated parking spaces would be a huge help. We have a green area, between our home, and the road. Which makes things very difficult, as I can only walk a short distance. Especially if someone parks in the area that is closest to my home.”

A third of the comments made at the end of the survey are about the components in tenants’ home that they feel need to be upgraded or replaced. This is consistent with the fact that property maintenance is the second best predictor of overall satisfaction, but the specific problem that people are concerned with appears to vary quite widely by property, with no main dominant issue (chart 12.3).

Nevertheless, if we are to look at the top of the list it is **windows** that are now the most mentioned component (6%, was 4%), followed closely by problems with **doors** (5%, was 3%). Slightly more commenters raise the issue of **damp, mould** or condensation than a year ago (5%, was 3%) with this now third on the list most frequent topic.

12. Additional comments

12.2 Neighbourhood improvements - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12.3 Property improvements - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12. Additional comments

"For 11 years I have been reporting my windows and doors are not fit for purpose as they let in wind and rain and any insect that wants to walk in. Numerous attempts to repair have been made but reports by workman have told the council they cannot repair them they are too old and not fit for purpose ... I am still sitting here in a cold draughty house, suffering terribly with no date or communication about when the work will be done."

"Our home has really poor windows and lets in cold air in the winter so it's really hard to keep in the warm. We've been saying for the last 6 years our windows need replacing. But still nothing done."

"We had a visit from you in March this year about problem's it any in our home and we told you our windows need replacing because they have been in now for 34 years and they don't close properly they are draughty and all misty inside the pieces of glass and, but we haven't heard anything about you doing then at all."

"I am fed up with the communal front door being accessible to anyone to be able to let themselves in at all hours. As a vulnerable person it is not nice to have people smoking and taking drugs.."

"Replacement internal doors - would be nice. The current ones are in very poor condition."

"I got mould round my windows and windows let cold air through."

"In my flat I have suffered dampness council have sorted over time ... still got dampness in spare room carpet ruined, hall way carpet has a stench, but I clean, also cavity on wall from bedroom is meant to be done still not done."

"Had a home inspection and the housing officer took photos of mould, blown sealed units and broken hinges on the front door, she said she would report them and they would be fixed. A few weeks later a man from the council arrived did nothing apart from telling my wife that he would send his UPVC surveyor around. So far, he hasn't arrived."

Slightly more comments were about the repairs and maintenance service compared to a year ago (17%, was 15%, chart 12.1).

There are a number of specific issues that tenants raised regarding the repairs service (chart 12.4), and it is notable that tackling **outstanding jobs** and the need for **better information and communication** remain the two main areas to improve with comments on both more frequent than they were previously. Similarly, there has been a slight increase in the proportion of comments asking for a quicker response (4%, was 2%). Example comments on these themes include:

"I reported a required bathroom repair some time ago. Although a contractor was eventually assigned, the work remains incomplete."

"They need to follow up with any requests for repairs. As we are still waiting since July for the problem with falling cement from our roof. And the sub-contractors are full of excuses (rapid)."

"Poor service. Reported several things wrong. All they do is send out surveyors and nothing gets done. Ring up to get an update and nothing has been reported. Total laziness"

"We have been waiting for contact about some repairs that need sorting. We have had no contact since the surveyors come. Months ago."

"I would appreciate that jobs needing doing are done as we are still waiting for repairs after many years. At least 4 people have visited property and promised work to be done, but it hasn't."

"When you book repairs, it would be nice to have an update on the process or when a decision is made, instead of us keep ring for updates."

"Communications with any repair company seems to be they will turn up when they like no advance warning no consideration if you work or not."

"Someone - came to see the property early part of the year, to see if anything needed doing or repaired. He said certain things would be done i.e. Leaking shed roof. 3 panels of fencing. I have not heard from anyone since, and repairs not done. Very disappointing really."

12. Additional comments

12.4 Repair and maintenance improvements - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12.5 Customer service and communication improvements - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12.6 Other improvements - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

12. Additional comments

12.7 Positive comments - detail

% Base 468 | Proportion of all tenants that commented. Includes multiple responses. Coded from verbatim comments.

Very few survey respondents commented about the customer services they received and/or communication with the Council (excluding any issues with repairs). Nevertheless, **being kept informed** remains the most commonly raised communication issue (chart 12.5) There has also been a small increase in comments asking for more/regular contact with tenants.

"I think an app would be useful or a website to check; rent payment and to report something, rather than calling & every time."

"It's a good service, be nice to have council meetings to address problems with estate."

"We are satisfied with service we get but would like a visit from housing services at home on some notified times."

"It would be nice to be able to speak to the person you phone they are either out on business or on holiday you leave a message they very rarely phone back. - very frustrating."

In terms of other themes, slightly more relate to concerns around **transfers and allocations** than was the case last year (6%, was 4%), with typical comments on this topic including:

"I went on the Jigsaw transfer list back in July 25. Finding it hard to talk to someone about a move. Knew one ever gets back to me. I would like to down size to a one/or 2 bed property from my 3 bed house."

"Did write letter to see if it was possible to change my flat 2 bed for over 55, bungalow but never was answered."

"Requested to move but no help & suffers on my mental health."

"I would like all neighbours to be retired people, younger people do not fit into this neighbourhood and do not respect the properly."

"The area has gone down since allowing out of area people in and younger into bungalows."

"The house is overcrowded due to 8 of us living in a 3 bedroom property"

12. Additional comments

Finally, it is important to remember that around a quarter of comments were again of a positive nature (25%). We therefore conclude with a selection of comments that highlight the **positive** perception of the services that many hold:

“I have lived in my home for 41 years. When I have to report for a repair the girls in the office who answer the phone are excellent. I know I don't often phone but when I do they are so helpful & very quick with their help. They are to be applauded. I love my home and garden. Thank you.”

“I am satisfied with all I come into contact with, and I have been a tenant since 1963.”

“Very happy here and made it my home and feel it's a very safe place to live.”

“I have never encountered a problem when I have had to deal with the council for whatever reasons.”

“A great overall service from Tendring Council. A happy tenant.”

“The services provided by T D C are excellent I'm very happy. When I have phoned staff are very helpful, polite & friendly always resolve issues. (repairs & surveyor). Thank you all really appreciate all you do well done.”

“I am fairly new to Tendring Council, but I must say they have been more than helpful with everything I've have needed help with.”

“My home is cosy and perfect for my needs. I feel safe in my neighbourhood and people are friendly. Tendring Council always listen to me when I phone and any problems I may have are dealt with without any problems or fuss.”

“I am very happy with the property and how much rent is required for the standards at the property. The neighbourhood are friendly and we've not had any issues.”

“I very much appreciate the inspections of the neighbourhood especially where we are invited along to give our input. Also, I'm thankful for all the work TDC do!”

13. Respondent profile

In addition to documenting the demographic profile of the sample, tables 13.10 to 13.18 in this section also display the core survey questions according to stock, age group and patch. When considering this table it is important to bear in mind that some of the sub groups are small, so many observed differences may simply be down to chance. To help navigate these results they have been subjected to statistical tests, with those that can be confidently said to differ from the rest of the sample being highlighted in the tables.

Appendix A. Summary of approach

Overview

The survey was conducted by ARP Research between 28 October 2025 and 15 January 2026.

Responses

Overall, 1,020 LCRA (low cost rental accommodation) tenant households took part in the TSM survey, which represents a response rate of 35% (error margin +/- 2.5%). This comfortably exceeded the stipulated TSM target error margin of +/- 4.0%. There were 780 postal completions (77%) and 240 online completions (24%).

Sampling and fieldwork

This was a census survey paper self completion survey distributed to all LCRA households, comprising 2,706 general needs and 253 sheltered. This was followed by two further postal reminders to non-respondents, the first being a reminder letter and the final reminder being a full replacement copy of the questionnaire. The survey was also available for completion online, with two email reminders sent to any survey non-respondents with a recorded email address during the course of the fieldwork. This numbered 970 households, 116 of whom responded (12%).

This methodology was chosen to be consistent with the most recent TSM surveys conducted by the Council. The survey was incentivised with a free prize draw of shopping vouchers worth £250, £150 and £100.

Population

The population for the survey was all 2,957 Tendring District Council LCRA households on 22 October 2025. None were removed from the sample frame. The survey used paper and online methods to ensure accessibility from a wide range of tenants. The online survey was available in alternative languages via Google translate.

Data presentation

Readers should take care when considering percentage results from some of the sub groups within the main sample, as the base figures may sometimes be small. Many results are recalculated to remove 'Don't know/not applicable' or similar responses from the final figures, a technique known as 're-basing'.

Error Margins

Error margins for the sample overall, and for individual questions, are the amount by which a result might vary due to chance. The error margins in the results are quoted at the standard 95% level, and are determined by the sample size and the distribution of scores. For the sake of simplicity, error margins for historic data are not included, but can typically be assumed to be at least as big as those for the current data. When comparing two sets of scores, it is important to remember that error margins will apply independently to each

Representativeness

The final survey data was weighted by interlaced stock type, age group, and postcode district to ensure that the survey was representative of the tenant population as a whole. The characteristics by which representativeness was determined were:

Stock

2.6	3.4	2.6

Tests of statistical significance

When two sets of survey data are compared to one another (e.g. between different years, or demographic sub groups), the observed differences are typically tested for statistical significance. Differences that are significant can be said, with a high degree of confidence, to be real variations that are unlikely to be due to chance. Any differences that are not significant *may* still be real, especially when a number of different questions all demonstrate the same pattern, but this cannot be stated with statistical confidence and may just be due to chance.

Unless otherwise stated, all statistically significant differences are reported at the 95% confidence level. Tests used were the Wilcoxon-Mann-Whitney test (rating scales), Fischer Exact Probability test (small samples) and the Pearson Chi Square test (larger samples) as appropriate for the data being examined. These calculations rely on a number of factors such as the base figure and the level of variance, both within and between sample groups, thereby taking into account more than just the simple difference between the headline percentage scores. This means that some results are reported as significant despite being superficially similar to others that are not. Conversely, some seemingly notable differences in two sets of headline scores are not enough to signal a significant change in the underlying pattern across all points in the scale. For example:

- Two satisfaction ratings might have the same or similar *total* satisfaction score, but be quite different when one considers the detailed results for the proportion *very satisfied* versus *fairly satisfied*.
- There may also be a change in the proportions who were *very* or *fairly* dissatisfied, or ticked the middle point in the scale, which is not apparent from the headline score.
- In rare cases there are complex changes across the scale that are difficult to categorise e.g. in a single question one might simultaneously observe a disappointing shift from *very* to *fairly* satisfied, at the same time as there being a welcome shift from *very dissatisfied* to *neither*.
- If the results included a relatively small number of people then the error margins are bigger. This means that the *combined* error margins for the two ratings being compared might be bigger than the observed difference between them.

Key driver analysis

“Key driver analyses” are based on a linear regression model. This is used to investigate the relationship between the overall scores and their various components. The charts illustrate the relative contribution of each item to the overall rating; items which do not reach statistical significance are omitted. The figures on the vertical axis show the standardised beta coefficients from the regression analysis, which vary in absolute size depending on the number of questionnaire items entered into the analysis. The *R Square* value displayed on every key driver chart shows how much of the observed variance is explained by the key driver model e.g. a value of 0.5 shows that the model explains half of the total variation in the overall score.

Benchmarking

The questions are benchmarked against Regulator of Social Housing’s published national 2024/25 year end TSM figures for local authorities. For each question the benchmark group is separated into 4 quartiles based on rank order, with a central median average. In the report the data is presented as a median average score for the benchmark group on each relevant chart. In addition to the median value, the chart also indicates into which quartile the Council’s score falls relative to the benchmark group.

YOUR VIEWS COUNT AND COULD WIN YOU £250!

Dear {names},

As part of our commitment to taking your views into account, we are carrying out a survey of all our tenants to find out how satisfied you are with your home and the services you receive from us. This important information will be used to help us improve our services in the future and we would very much appreciate your help with this.

We would be very grateful if you could spare a few minutes to complete the enclosed questionnaire. An independent research company, ARP Research, are running this survey and will ensure that all your answers are treated in strict confidence and used for research purposes only.

The survey can also be completed online and can be found by scanning this QR code or at the following web address: www.arpsurveys.co.uk/tdc

scan me

Your unique username is: **9999www**

Everyone who returns a questionnaire can enter the prize draw where three lucky tenants will win Love2Shop vouchers worth £250, £150 or £100!

Your answers will help the Council to improve, guided by a better understanding of how you feel about your homes, neighbourhoods, and the services you use. It should only take a few minutes to complete. The Council will use your feedback to calculate and publish annual Tenant Satisfaction Measures which will be submitted to the Regulator of Social Housing.

If you have any questions you can contact ARP Research on 0800 020 9564, or alternatively you can speak to Tenant Involvement at Tendring District Council on 01255 686690.

For further information about how we process your data, please go to <https://www.tendringdc.gov.uk/privacy>

We look forward to hearing your views.

Yours faithfully

Councillor Andy Baker (Portfolio Holder for Housing & Planning)
Carol McDougall (Chair of the Tenant Panel)

Appendix C. Data summary

Please note that throughout the report the quoted results typically refer to the '*valid*' column of the data summary if it appears.

The '*valid*' column contains data that has been rebased, normally because non-respondents were excluded and/or question routing applied.

Weighting has been applied to this data to ensure that it is representative of the entire population (see Appendix A).
